DETAILED ACTION

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

Regarding claims 1, 5 and 14:

The primary reason for the allowance of claim 1 is the inclusion of: a control circuit for receiving and processing said sensor output and for turning off said power-supply switch in response to said control circuit accepting said sensor output from said sensor. It is this feature found in the claim, as it is claimed in the combination that has not been found, taught or suggested by the prior art of record, which makes this claim allowable over the prior art.

The primary reason for the allowance of claim 5 is the inclusion of: control circuit for detecting completion of reception of sensor module output and turning off the sensor module power supply switch in response to the detection of completion of reception. It is this feature found in the claim, as it is claimed in the combination that has not been found, taught or suggested by the prior art of record, which makes this claim allowable over the prior art.

The primary reason for the allowance of claim 14 is the inclusion of the data line switch controlling power to a data line receiving sensor module output in response to receiving output signal. It is this feature found in the claim, as it is claimed in the combination that has not been found, taught or suggested by the prior art of record, which makes this claim allowable over the prior art.

Claims 2-4 are allowed due to their dependency on claim 1.

Claims 6-13 are allowed due to their dependency on claim 5.

Claims 15-20 are allowed due to their dependency on claim 14.
